DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-16 are drawn to a magnetic memory comprising a magnetic substance composed of a disc-shaped first magnetic layer and a ring-shaped second magnetic layer formed on said first magnetic layer', classified in class 365, subclass 55.
 - II. Claims 17-18 are drawn to a method of fabricating a magnetic memory, classified in class 438, and subclass 400.
 - III. Claims 19-26 are drawn to a method for recording a magnetic memory, classified in class 365, and subclass 189.01.
 - IV. Claims 27-39 are drawn to a method for reading magnetic memory classified in class 365, subclass 225.5.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I, II, III and IV are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility such as a particular magnetic memory structure which could have been used with different methods for storing and/or reading the information. Furthermore, the magnetic

layers recited in invention II could be similarly formed by using different manufacturing techniques without such specific masking and introducing magnetic particles. Lastly, both storing and reading methods recite in inventions III and IV could have been similarly used in different memory structures that does not require the cited particular "ring-shaped" or disc-shaped" magnetic layers. See MPEP § 806.05(d).

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification or subject matter, and require different fields of search, restriction for examination purposes as indicated is proper.
